

ASSESSMENT OF THE REGULATORY PERFORMANCE OF THE ZAMBIA MEDICINES REGULATORY AUTHORITY By Constance Sakala Chisha | Supervisors: Dr Stephanie Leigh and Professor Stuart Walker

Outline of the Study

- Introduction
 Methods
- Results
- Objectives Recommendations

Introduction

- Zambia Medicines Regulatory Authority (ZAMRA) is a statutory body mandated by law to regulate and control the manufacture, sale and use of medicines in Zambia.
- It is a founding member of the Zazibona initiative.
- Strengthened regulatory systems for medicines are critical for a well functioning health system.
- Many low to middle income countries lack the capacity to effectively and efficiently regulate medicines.

Rational of the ZAMRA study

- Timely accessibility of the quality, safe and efficacious medicines is key in any health care system.
- National medicines regulatory authorities are responsible for the assessment of medicines within the targeted timelines.
- Currently there is no documented evidence of the regulatory performance of the Zambian Authority in terms of the review process of medicines.
- This study has reviewed the elements of regulatory performance for ZAMRA.
- It will form the benchmark for further assessment.
- The gaps identified will help improve the review process and patients' access to medicines.

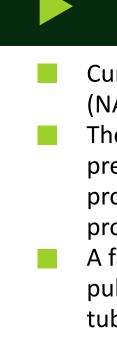

Good Review Practices (GRevP) Implemented by ZAMRA – Quality Measures

Aim and objectives

Aim: To assess the performance of the Zambia Medicines Regulatory Authority as a means of strengthening its regulatory systems and its role in relation to the newly established African Medicines Agency.

Objectives include:

- Assessing the current regulatory review process of the Zambia Medicines **Regulatory Authority.**
- Identify the key milestones and target timelines achieved in the review process. Evaluate the overall performance for the review models and different product types approved in Zambia during the period 2020–2023.
- Assess the Zambia Medicines Regulatory Authority's compliance with good review practices and quality decision-making practices employed in the review process.

Methods

- his study will assess the current regulatory review process in the Zambia Medicines egulatory Authority.
- validated questionnaire has been used to map key milestones and activities ssociated with the review process.
- describes the organizational structure, the type of review models used, review practices and the decision-making process used in the review process.

Part 1 - Organisation of

Part 2 - Types of Review Part 3 - Key Milestones

in the Review Process

Part 4 - Good Review Practices (GRevP): Building quality into the assessment and registration process

Part 5 – Quality **Decision-Making** Processes

Results

- Currently, ZAMRA implement three review models to evaluate New Active Substances (NASs) as well as generic products.
- These include the verification model which was mainly used to review products prequalified by WHO or approved by a Stringent Regulatory Authority, the abridged process for products approved by an SRA and a full review for both NASs and generic products that were not previously reviewed or pregualified by WHO.
- A fast-track application was used to expedite the review process for products of high public health concern which include mainly antimalarials, anti-cancers and antituberculosis drugs. The Authority receives mostly generic products as compared to NASs

A total of 424 products were approved during the period 2020-2023, which included 22 NASs and 391 generics. The overall approval time regardless of the type of model of review was 29, 39, 35 & 33 months in 2020, 2021, 2022 and 2023 respectively for the total number of generics and NASs.

This reflects the queue time of 18 months as well as the fact that most applicants exceeded the set target timeline of 120 days by up to 6 months to respond to the questions thereby prolonging the overall review time. However, WHO PQ generics were reviewed within 90 days using the verification route.

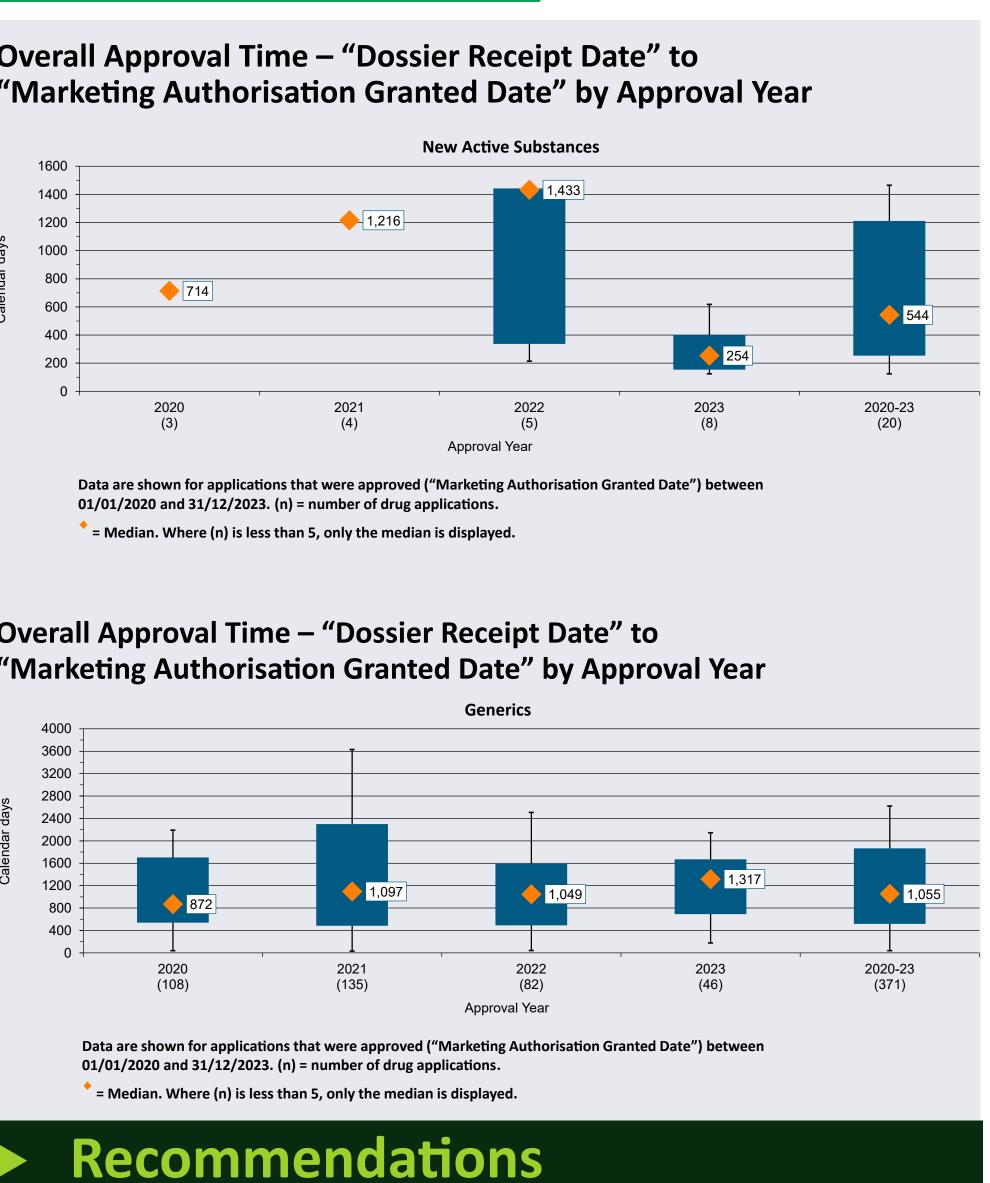

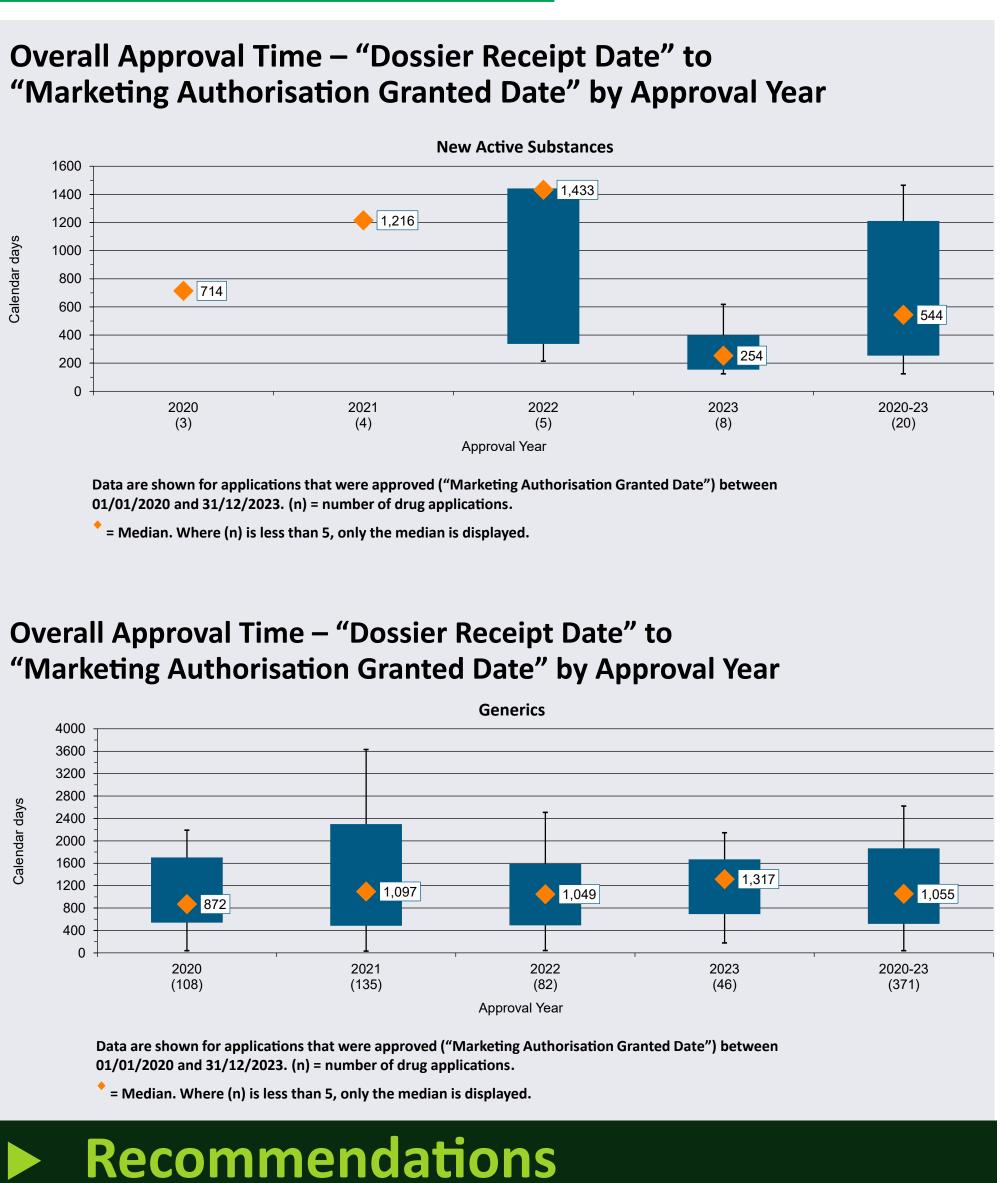

Data are shown for applications that were approved ("Marketing Authorisation Granted Date") between

01/01/2020 and 31/12/2023. n = number of drug applications.
